## Nashy Papers.

The Negro being found not available, Mr. Nashy and his Followers decide to go back on him—  
Meeting, the Effect of which was spoiled by Pollock, the Illinois Slave-Keeper, and Joseph Bigler, late G. S. A.

(From the Toledo Blade.) Post Office, CONFERENT X Roads, (Which is in the State of Kentucky.)

July 28, 1867.

The speculations in wool into which the Democracy of the South embark some months ago, I regret to say, resulted disastrously. The negro ain't fitted for co-operation with the Democracy. Instead uv hangin' onto us like the ivy onto the oak, he dislodged that, in the South at least, we were really the oak and we the ivy; instead of lookin' up to us, he contracted a disease of habit uv looking down onto us. There was nothing else available for us, and therefore they was decided to go back onto the African, and to again attempt his re-inclusion to er near his normal spear in the abnormal condition uv the times wood admit. The directors uv the college met and changed the name of the institution back to the "Southern Military & Classical Institut," and the Corners was itself again.

Deekin Pogrom looked on the ten years he'd bin lifed of him. "How pleasant 'tis," said he, "to walk erect agin in front uv a nigger, and to see how the they was niggers!" Oh, if I could only won me one wunst more, methinks I do die happy!

We had a meetin last nite to consider this nigger question, with wood hay resulted in great good and had a powerful influence toward strengthenin' the hands uv our brethren in the North, who are fightin the heresy uv nigger suffrage, hed it not bin for that irration, Pollock, and that pest, Joe Bigler. I hed made my regular speech on the nigger, and with much effect. I hed quoted from somebody's quoteshum from Agassiz, which demonstrated the radical difference between the white man and the colored Caucausian; arguin from the length uv his heel and arm; the thickness uv his skull and so forth, that the nigger wuz totally unfit to exercise the rites uv free men. I war applauded vociferously, and by none more than Pollock and Joe Bigler. Es I took my seat and wuz a wipin the perspiration from my classiee brow, feelin that I hed settled that question, Pollock riz and desired to say a few words and make a suggestion. Sed he:

"I've listened with interest to the eloquent speeches of our friends, and am gratified by what is new to me. If I ever doubted the inferiority uv the nigger them doubts are removed, per ... alluz, that the statements uv the speaker is true, uv wish I hav no doubt, or the character uv the speaker is a sufficient guarantee for the truth uv whichever he sez."

Burleigh, in one of his letters from London, is speakin of Spurgeon's preaching, says: "It is a kindly old lunatic, and if his kites are not so harmless as those of Miss Trotwood's Mr. Dick, if the lightning does come down the string sometimes, he doesn't really mean any harm, and must be forgiven." Burleigh, in one of his letters from London, is speakin of Spurgeon's preaching, says: "It is a kindly old lunatic, and if his kites are not so harmless as those of Miss Trotwood's Mr. Dick, if the lightning does come down the string sometimes, he doesn't really mean any harm, and must be forgiven."

Richmond is about to have the Black Creek. The Examiner solemnly waris managers that Richmond will put up with no such nonsense as "elaste dresses." These little improvements will do for the provinces, but the capital will be satisfied with nothing less than the original mudities.

In New York an ingenious mechanic has made a novel invention, designed for the comfort of horses during the hot weather. It consists of a small reservoir, filled with water, placed on the animal's head, keeping the brain cool, and thus wading off the effects of the heat and sunstroke.

Widow of King history. She was governed by the King of France to year by the King of Great Britain, 29, to 30, in State of Virginia,

by the Territory of Ohio, 16, and by those of Indiana and Michigan, 9 and 16 each. She became a Territory of the United States in 1836, and a State in 1848.

The editor of the Home Journal went into a New York up-town church on Good Friday, and taking from the rack a Book of Common Prayer, to his great surprise found inserted on the inner side of the cover a looking glass. This arrangement, he presumes, enables the fair owner to admire herself and adjust her chignon during service.

The repeal of the Reciprocity Treaty between the United States and Canada, it is reported, has caused an increased trade between Nova Scotia and Canada. Formerly the U.S. exported about 300,000 barrels of flour annually from the United States, and 6,000 to 7,000 from Canada. Now the receipts are reversed, and about 7,000 barrels are taken from the United States and 300,000 from Canada.

The Webster Times chronicles a case of color-phobia at the Joslin House, in that village. The hotel-keeper undertook to exclude a colored traveler from Maryland from the public table, because he was a "nigger." But the colored traveler showed the landlord how ignorant a white man could be of the laws of Massachusetts, and had him summoned before Justice Stockwell, who read from the statutes and imposed a fine.

The BED of the OCEAN.—Soundings have been made in the North Atlantic to so great an extent that it is now possible to map out its bed as accurately as the interior of Africa or Australia. This ocean is a long trough of varying depth, winding, probably, from pole to pole. Its bed follows the general course of the Gulf of Mexico and there rocky peaks, like that of Teuerific, or huge mountains of sand, such as the Grand Banks of Newfoundland reach up to or beyond the surface. Between Ireland and Newfoundland there exists a remarkable plain known as the telegraphic plateau, which is evidently a continuation of the great watershed, which between latitudes 40 deg. and 50 deg. North, surrounds the earth, and divides the water flowing North from those flowing South.

TRANPLANTING IN THE NIGHT.—A friend in whose powers of observation we have confidence, informs us that last spring and summer he made the following experiments: He transplanted ten cherry trees while in blossom commencing at four o'clock in the afternoon, and transplanting them each hour until eight o'clock at night. Those transplanted during daylight shed their blossoms, producing little or no fruit, while those transplanted during the darker portions maintained their condition fully. He did the same with ten dwarf pear trees, after the fruit was one-third grown. Those transplanted during the night perfected their crop and showed no injury from having been removed. With each of these trees he removed some earth within the roots.

There are strong as well as solid men in Boston. A lougher in the gymnasium says that there are among the amateur gymnasts sixty gentlemen who lift a hundred pounds each, who can lift eight hundred pounds, ten who can lift nine hundred pounds, two who can lift one thousand pounds, and one who lifts twelve hundred and thirty pounds. This lifting is unaided by straps, pulleys, or any other mechanical help. The majority of these strong men of Boston follow sedentary pursuits—they are editors, clergymen, lawyers, traders and clerks. At one of these gymnasiums there are three ladies who can lift seven and forty pounds, a lot of girls who lift six hundred pounds, and a "sweet little girl" who lifts two hundred pounds.

EDDIE in 1868.—A correspondent of the Tribune at Orlando, under date of June 24th says:

"Next year there will be two eclipses, and both will be of the sun. The first will be a central or annular eclipse of the sun, February 23d, visible in South America. The line of central eclipse will come on the earth in the Pacific Ocean west of Lima, South America, and will pass directly through South America, in a direction a little north of east. The sun will be centrally eclipsed at noon, about two hundred miles east of Natal, Brazil, and the central line will leave the earth in Nubia, Africa. The next will be a total eclipse of the sun, August 18th, invisible in America. The line of total eclipse will come on the earth near Gondar, in Abyssinia, and will leave the earth near the New Hebrides Islands. At the city of Madras in Hindostan, it will be as follows: Commences, August 18th, 8:14 A.M., greatest obscuration, 9:27, end, 10:15. The size of the sun will be 100 miles in diameter. It is worthy of note that the line of total eclipse will be 100 miles wide, and a person within this line will see the sun totally eclipsed. At some places the total eclipse will last over four minutes, which is nearly as long as it ever can last at one place. In the first eclipse there will be a ring formed around the moon, lasting at some places for nearly seven minutes."

And Pollock and Bigler and the niggers present left the meeting house, laffin uproariously and shouting, "Hooray! Hooray! Hooray!"

I doubt whether the result of the investigation will help our friends North. The fact is it was overdone. It wuz carried too far. There is a pint at which facts ought to stop—Democratic facts particular. In this instance the investiga-
